Letter of recommendation

São Paulo

February 9, 2023

Mohamed Dabour was one of my best students in my teaching career. He was disciplined, attentive and very participative. I taught mathematics in his class for 6 months and he caught my attention in my first classes. His contributions were great, he asked questions, participated and helped other students with their doubts and involved them in classes, showing a great collective spirit. He was so dedicated to his studies that I offered him extra online Mathematics classes so that he could improve his skills and feel comfortable understanding Mathematics in English. He was present at all our meetings, solved exercises, answered questions and showed that he wants to improve and achieve great results. He prospered par excellence.

In addition to his skills with school subjects, he also showed a great ability to deal with his failures and help other students. When he didn't understand something at first, he would always ask in class or come and ask me between classes. He didn't seem to be satisfied with just his high grades, he needed to have in-depth knowledge of the subject. At the Islamic School he showed that he also cares about others, helping not only students in his grade, but also younger ones to improve at school.

I can say with certainty that Mohamed Dabour will contribute a lot to any institution he is a part of. He is dedicated, intelligent, polite and has strong collaborative traits. With the right guidance, he is likely to do great things, contribute to society and set an example for others to follow the same path.

School: Brazilian Islamic School
Professor: Alan Paganelli, graduated in Mathematics from the Federal Institute of São Paulo, master's student at the University of São Paulo.
